Portland Cement History by State and Market. This report summarizes estimated cement consumption along with estimated production in real dollars for 23 different market classes for 56 states and partial state geographic areas from 1995 to 2023. The report is released twice a year and consists of year over year percent changes. Spring preliminaries are the first look at market level activity for the given year based on construction trends. The report is further refined with a fall final release as non-building data such as agriculture and oil well cement usage becomes available. Can be purchased with individual state data or solely national data.
